Environment:	<ol style="list-style-type: none">1. Google chrome.2. Microsoft edge.3. brave browser.		

Description

when user is returning the book the application is not able to renew the book which is already issued. And when more than 2 issues are added to issue book category the application is getting crashed.

steps to follow

1. open library management software.
2. click ok search bar and search for book data structures.
3. not able to find the book in issued list which is already issued.
4. click on issue category.
5. click on add issue .
6. enter issue details in issue book category.
7. add another two issues.
8. observe the result the application is crashing.

expected result : the user should able to add renew books which are issued. and when issue is add to issue book category the application must accept the issue as many issues are added.

Actual result : when user is renewing book it is not able to do. and when adding this issue to issue book category the application is crashing after adding 2 issues.
